~~CHIRURGICAL INSTRUMENTS~~

PRINTED IN THE YEAR

[8]

THE many improvements and inventions that have attended the practice of surgery, and which have introduced a variety of instruments not to be met with in my former catalogues, appeared a sufficient inducement for a more modern compilation. It will be found that my present list consists of such instruments only as are now in use in the most eminent hospitals in London; which, it is presumed, will prove a matter of great convenience to those gentlemen of the faculty, whose residence is very distant from the metropolis; and will prevent orders, made out from this catalogue, comprehending any instrument that has not the sanction of the most respectable practitioners.

I shall consider myself in the highest degree obliged by those gentlemen who

may intrust me with their thoughts upon any intended improvement, or invention; and flatter myself that, by a strict attention to what they may impart, I shall be enabled so far to meet their ideas, as to execute, with precision, whatever their ingenuity may have planned: and I beg leave to add, that their confidence shall never be abused, by having their productions rendered more public than their permission extends.

Every article inserted in this catalogue may be had at my shop, finished in the most complete and perfect manner; and those instruments, which, from the nature of the operations they are calculated to perform, may be called for upon the most sudden emergency, are at all times to be met with, fit for immediate use.

Having engaged a number of the best workmen, who manufacture every article immediately under my own inspection, the public may be assured that the
